

# ENVIRONMENTAL POLICY

---

*UFL and the environment - reuse, reduce, recycle.*

UFL has a commitment to quality - in both design and manufacture, and to the sustainability of the products we install. We hold ISO 9001 certification and we ensure that our manufacturers and contractors hold similar certification.

We research new technologies and wherever possible, we consider the life cycle of the product, and the ease of recycling. We choose materials and components which can be reused and recycled, and are cognizant of our carbon footprint and the impact of our actions on the planet, which we actively seek to reduce.

UFL has a long-term commitment to continue to find new ways to reduce our environmental impact.

UFL are committed to:

- Reusing any item or component before discarding it
- Reducing our energy consumption
- Reducing our pollution
- Complying with environmental legislation
- Working with our supply chain in regards to environmental and social compliance
- Reducing waste going to landfill through recycling
- Striving for continual improvement

Through the efforts of our manufacturing partners, many of UFL's products already comply with Greenguard and LEED certification (US Green Building Council), GECA and Green Star (Australian Green Building Council), EPD International certification and FSC (Forestry Stewardship Council) standards.

UFL understands that corporate social & environmental responsibility goes beyond the point of sale and warranty periods. We place huge importance on fulfilling environmental compliance at all stages throughout the product lifecycle - from product design through to production, installation and the eventual return and recycling of the product.
